

ABSTRACT OF THE DISCLOSURE

A vibration gasket that is capable of dampening vibrations or movements of a vehicle steering wheel is disclosed. The vibration gasket has a first surface that may be attached to an airbag inflator and a second surface that may be attached to an airbag mounting plate. At least one foil strip is also added to the vibration gasket. The foil strip has an inflator interface and area and a mounting plate interface area. The foil strip is constructed such that the inflator interface area may be positioned between the first surface and the inflator. Similarly, the foil strip is also constructed such that the mounting plate interface area may be positioned between the second surface and the mounting plate. Additionally, the vibration gasket may also be used to electrically ground the airbag inflator.
